

Harbourview Subdivision Electrical Infrastructure Upgrade Project Summer/Fall 2017

Investment in the future of Saint John and its customers!

Saint John Energy's electrical underground distribution system located in the Harbourview Subdivision will be undergoing an upgrade to improve reliability of the aging infrastructure.

Project Benefits;

- Reducing outage restoration time
- Improving reliability levels
- Improving safety and environmental systems

During the project the customers will notice;

- An increase in activity of Saint John Energy workers and Contractors
- Construction activity to allow removal and installation of underground and overhead infrastructure
- Scheduled outages

Saint John Energy is redesigning the subdivision's system with a hybrid overhead and underground system. These improvements are necessary for us to provide reliable service, improve public safety, maintenance and lessen the impact on the residents existing landscaping. Saint John Energy will do everything we can to minimize disruptions in your neighborhood during this project.
